

NICHOLAS ZAMBRANO

SOFTWARE DEVELOPER

13/09/23

Dear HubSpot,

I consider myself as a very technical candidate as I have pursued very rigorous courses in my career such as Mathematics, further mathematics, Business Studies and Economics all of which have honed my analytical and problem solving skills . Now in higher education where I am studying computer science, the idea of making websites dynamic and being able to respond to user input has increased my curiosity of further enhancing my existing knowledge of coding. Which is why I have attended to a Software Engineering bootcamp so that every project i take, goes beyond just lines of code to eventually becoming a meaningful tangible product. Hence, I am excited to be applying for the Developer Summer Internship at Barclay as having experience with several programming languages I will be able to adapt and bring new innovation ideas towards the tech industry.

I have been involved in several practical group projects during my time at university, as mentioned i was part of a team for building a time management application. This high level of collaboration has enabled me to enhance my skills in front end as well as backend as I was able to soak different points of views from other members, which allowed me to approach certain features with an open mindset such as considering what potential drawbacks may arise if implemented. Not only working as a team excelled my existing technical abilities it also allowed me to adapt to problems much quicker as being surrounded in a team where it's not an equal playing field as we all had different coding backgrounds .

In addition, my passion for technical challenges, coupled with my strong educational background in computer science and hands-on experience in building practical projects, has prepared me to excel as a full stack developer. I am eager to bring my expertise in various programming languages and problem-solving skills to the table, enabling me to contribute innovative ideas and solutions to the tech industry.

Without a doubt I am certain that my ability to adapt quickly and work effectively in diverse teams sets me apart as a candidate who can thrive in the dynamic and ever changing environment of the tech industry. I am confident that my dedication and enthusiasm for coding and software development will allow me to make a meaningful impact in any team I become a part of.

Overall, I consider myself a very committed and hardworking individual always willing to improve myself and try to get results. Outgoing and a confident communicator that will not hesitate in approaching someone when in need. I am motivated to go the extra mile and produce quality pieces of work, also craving for new experiences and being able to handle complex situations while eager to embark on further challenges. I would, therefore, welcome an opportunity to meet you and discuss my candidacy in more detail.

Kind regards,
Nicholas Zambrano
